DETAILED ACTION

Response to Amendment

1. This action is in response to the amendment filed September 6, 2007.

Claims 1, 6 and 16 are amended rendering claims 1-9 and 16-21 pending, with claims

11-15 and 22 withdrawn as a non-elected invention.

The indicated allowability of claim 6 is withdrawn in view of the newly discovered reference(s) to Moriau et al (U.S. 6,006,486). Rejections based on the newly cited reference(s) follow.

RESPONSE TO REQUEST FOR RECONSIDERATION

2. Applicant maintains claim 22 links inventions I and II and should be examined with the elected invention. When all claims directed to the elected invention are allowable, should any linking claim be allowable, the restriction requirement between the linked inventions must be withdrawn. Any claim(s) directed to the nonelected invention(s), previously withdrawn from consideration, which depends from or requires all the limitations of the allowable linking claim must be rejoined and will be fully examined for patentability.

The requirement is deemed proper and is therefore made **FINAL**.

10/697,560 Art Unit: 1794

Claim Rejections - 35 USC 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claim 4 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 4 recites the limitation "for gluing fibers of the support board". There is insufficient antecedent basis for this limitation in the claim, as the term fiber has been deleted from claim 1.

Claim Rejections - 35 USC § 103(a)

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 6. Claims 1-3, 8-9, 16-19 and 20-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Moriau et al. (U.S. 6,006,486).

Moriau discloses a floor panel (column 1, lines 5-6 and 66-67) comprising a core (support board) made of compressed ground wood particles and binder material (column 3, lines 26-38) having a decorative top layer and a backing layer (termination

10/697,560 Art Unit: 1794

layers) (column 9, lines 1-11 and Figures 2-11) where the decorative top layer is interpreted as having a structured surface. Moriau discloses additional layers can be applied to the floor panel (column 9, lines 7-9) which appears to include cover layers, as in claim 21. Because the compressed material is made of medium density fibreboard and made of glued and compressed woodbased material, it is expected for the density of the top side of the support board to be lower than the density of the underside support board, for the support board to have a non-uniform density distribution over its cross section from the top side to the underside and for the density of the core to decrease from the top side and decrease from the underside to a substantial midpoint, which would result in a density distribution that is substantially parabolic in shape as in claims 1, 8, 16 and 20, absent any evidence to the contrary.

Although Moriau does not teach the gluing factor amount or density of the layers as in claims 2-3, density and gluing factor are optimizable features. In the absence of any evidence to the contrary, it would have been obvious to one of ordinary skill in the art to optimize the layers of the panel because discovering the optimum or workable range involves only routine skill in the art. The density and gluing factor directly affects the durability of the panel. *In re Aller* 105 USPQ 233 and see *In re Boesch*, 617 USPQ 215. Additionally, there is also no clear teaching away from the density and gluing factor of the panel by Moriau, as the reference does not exclude any values for the density or gluing factor. In claim 19, the phrase, "comprises a structure composed of a stamping" introduces a process limitation to the product claim. The patentability of a product does not depend on its method of production. If the product in the product-by-process claim is

10/697,560 Art Unit: 1794

the same as or obvious from a product of the prior art, the claim is unpatentable even though the prior product was made by a different process." In re Thorpe, 777 F.2d 695, 698, 227 USPQ 964, 966. Further, process limitations are given no patentable weight in product claims.

Claim Rejections – 35 USC § 103(a)

7. Claims 4-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Moriau et al. (U.S. 6,006,486) in view of Clausi (U.S. 5,855,832).

Moriau is relied on for instant claim 1 as above. Moriau does not disclose the panel comprising UF and isocyanates, as in claims 4-5 and 7. Clausi teaches a compressed wood fiber material having a binding agent including urea formaldehyde (UF) and isocyanate (column 1, lines 12-20, column 13, lines 35-40 and column 14, lines 37-39). Moriau and Clausi are both related to compressed woodbased fiber material. It would have been obvious to one of ordinary skill in the art for the adhesive material of Moriau to comprise UF and isocyanate because Clausi teaches these materials are conventional binding (adhesive) materials.

Although neither reference teaches the gluing factor for isocyanates, gluing factors are optimizable features. In the absence of any evidence to the contrary, it would have been obvious to one of ordinary skill in the art to optimize the core (support board) of the panel because discovering the optimum or workable range involves only routine

10/697,560 Art Unit: 1794

skill in the art. The gluing factor directly affects the durability of the panel. *In re Aller* 105 USPQ 233 and see *In re Boesch*, 617 USPQ 215.

Response to Arguments

8. The rejection made under 35 U.S.C. 102(b) as being anticipated by Kyutoku et al. (U.S. 5,145,732) and made under 35 U.S.C. 103(a) as being unpatentable over Kyutoku et al. (U.S. 5,145,732) and Kyutoku et al. (U.S. 5,145,732) in view of Clausi (U.S. 5,855,832) are withdrawn due to applicant amending the claims to include a compressed woodbased material instead of a compressed fiber material. Kyutoku does not teach a woodbased material.

Conclusion

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Lawrence Ferguson whose telephone number is 571-272-1522. The examiner can normally be reached on Monday through Friday 9:00 AM – 5:30PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Keith Hendricks, can be reached on 571-272-1401. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
